

L-Carnipur 500

Bio-available L-carnitine for targeted intake

L-carnitine: An endogenous substance

L-carnitine is a naturally occurring substance, which is produced from the amino acids lysine and methionine. In foodstuffs, carnitine is mainly found in meat and as a result a purely vegetarian or vegan diet contains little or almost no carnitine. Aside from the intake through food, carnitine is also produced in our body if there is a sufficient quantity of essential co-factors available in the form of micronutrients. The total amount of L-carnitine in the body amounts to approximately 25 g, whereby the proportion is particularly high in the tissues with a high fatty acid metabolism, such as the skeletal and cardiac muscles. Biogena L-Carnipur 500 contains L-carnitine derived from a controlled and standardised production and thus, meets the highest quality requirements. The high bio-availability makes L-Carnipur 500 a good supplement to the daily intake of L-carnitine.

L-Carnipur 500

- Contains the endogenous substance L-carnitine

Possible uses:

- For the targeted intake of L-carnitine
- For supplementary L-carnitine intake in a purely vegetarian diet

Bioavailable micronutrients in a pure form

- Produced according to the pure substance principle
- No colouring agents or artificial flavourings
- Gluten-free
- Fructose-free
- Lactose-free
- Hypoallergenic
- Vegetable capsule shell
- 100 % vegan
- Quality tested
