

L-Tyrosin 400

For a targeted intake of the amino acid

L-tyrosine L-tyrosine – precursor of dopamine, noradrenalin and adrenalin

L-tyrosine is an amino acid and an exceptionally high quantity can be found in poultry, fish, dairy products and legumes. German chemist, Justus von Liebig, first discovered tyrosine in 1846 in common cheese, which is also the reason for the name of this amino acid. The Greek word "tyros" simply means "cheese". L-tyrosine is a non-essential amino acid because it can be formed by our body from the essential amino acid phenylalanine. In the body, L-tyrosine acts as a precursor of the hormones and neurotransmitters dopamine, noradrenalin and adrenalin. These hormones belong to the group of catecholamines, which takeover numerous different functions in the human body. Biogena L-Tyrosin 400 supplies the body with the amino acid L-tyrosine in a targeted manner.

L-Tyrosin 400

- Contains the non-essential amino acid L-tyrosine
- Supports the additional intake of L-tyrosine

Possible uses:

- For the supplementary intake of the amino acid L-tyrosine, a precursor of the hormones and neurotransmitters dopamine, noradrenalin and adrenalin

Bioavailable micronutrients in a pure form:

- According to the pure substance principle
- Without colours, flavours or glazing agents
- Gluten-free
- Fructose-free
- Lactose-free
- Hypoallergenic
- Vegetable capsule shell
- 100 % vegan
- Quality tested
