

NADH 20 Superior M-S-S

NADH - a substance that people talk about

NADH is present in every living cell of animals, humans and plants and is contained in many foods, especially animal products. Especially organs with a high energy demand, such as the heart, brain or muscles, have higher concentrations.

The abbreviation NADH stands for nicotinamide adenine dinucleotide in its reduced form, the H at the end thus stands for hydrogen. The body's own coenzyme is produced via the vitamin niacin. It has been known since 1906, when it was first identified by Arthur Harden and William Young. NADH is also often referred to as coenzyme 1.

Premium preparation of the extra class: microencapsulated, standardised, stabilised raw material

In its original form, NADH is very unstable when exposed to light, oxygen and gastric acid. This is why the premium mono-preparation NADH 20 Superior M-S-S was developed with the stabilised branded raw material PANMOL®. Due to the protected microencapsulation, the PANMOL® branded raw material used is optimally protected from external influences such as gastric acid.

NADH 20 Superior M-S-S convinces in the growing Biogena range with radical quality through a microencapsulated, standardised and stabilised (M-S-S) premium raw material in a dosage of 20 mg per capsule.

Possible applications

- For the targeted supply of NADH

Bioavailable micronutrients in a pure form

- According to the pure substance principle
- Without colours and flavours
- Gluten-free
- Lactose-free
- Vegetable capsule shell
- 100 % vegetarian
- Quality tested
