

Osteo Calbon Komplex® Gold

Premium preparation for the preservation of stable bone structures

Osteo Calbon Komplex® - For the supporting apparatus that carries you through life

The human skeleton consists of 206 to 212 bones, the exact number varies from person to person - which remains the same are the immensely important functions our skeleton has. Our bones support the soft body parts, protect the internal organs and play a decisive role in the movement as a starting point for the muscles. Like a strong fortress, for example, the skull bone is located around the brain, while the chest forms a protective shield around the heart and lungs. Even if it does not appear so at first glance, the bone is therefore a living, dynamic tissue that is constantly being remodeled to provide stability as well as elasticity. Bones consist mainly of connective tissue, which provides flexibility. It contains important micronutrients, above all calcium and phosphorus, which give the bone its strength and hardness.

Biogena Osteo Calbon Komplex® Gold supplies calcium and phosphorus from natural microcrystalline hydroxyapatite. The vitamin D contained here is an indispensable co-factor, as it plays an important role in the absorption and utilization of calcium and phosphorus. Vitamin K, which is present in this complex as the brand raw material K2VITAL® in a clinically validated and patented form, supports the preservation of stable bones. Biogena Osteo Calbon Komplex® Gold is complemented by silicon from bamboo extract and the trace element boron, thus offering a comprehensive supplement to your daily diet.

Osteo Calbon Komplex® Gold

- With minerals and vitamins to maintain stable bone structures
- Phosphorus is needed to maintain normal bones and teeth
- Calcium is needed to maintain normal bones and teeth
- Vitamin D contributes to the absorption and utilization of calcium and phosphorus and to a normal calcium level in the blood. It thus contributes to the preservation of normal bones and teeth.
- Vitamin K helps maintain normal bones

Fields of application:

- For the targeted supply of bone-relevant micronutrients
- To maintain stable bone structures for an active life in all situations
- As a source of the trace element boron and siliceous silica from bamboo extract
- As a nutritive contribution to the support of bones and teeth
