

Quercetin Phytoactive Gold

Quercetin - King of the flavonoids

The flavonoid quercetin is widespread in the plant kingdom and is mainly found in the coloured skins of red onions, apples, grapes or even capers. Flavonoids are a very prominent group within the polyphenols, which are considered to be very valuable plant constituents. Quercetin is often called the "king of flavonoids". This royal attribute is no coincidence, as the much sought-after flavonoid is the focus of recent research with promising results. Quercetin Phytoactive Gold contains quercetin as an active ingredient in the usual radical Biogena quality.

Patented phytosome technology enables optimal availability

The secret of Quercetin Phytoactive Gold lies in the Italian branded raw material Quercefit® and its very special production method: The valuable flavonoid is not present here in free form, but is encased in phospholipids from the sunflower. This technological innovation on a plant basis - patented as Phytosome® technology - enables the contained quercetin to be absorbed particularly well by our body. The optimal bioavailability of quercetin in the form of Quercefit® was clearly demonstrated in a clinical study. The basis of the unique raw material is the most popular source of quercetin, the Japanese cord tree (*Sophora japonica*).

Quercetin Phytoactive Gold - a state-of-the-art product with an innovative raw material at the cutting edge.

Possible uses

- For the targeted supply of quercetin

Bioavailable micronutrients in a pure form

- According to the pure substance principle
- Without colours and flavours
- Gluten-free
- Lactose-free
- Hypoallergenic
- Vegetable capsule shell
- 100 % vegan
- Quality tested
