

SAMe 200

S-adenosyl-methionine - significance for cell metabolism

SAMe (S-adenosyl-methionine) is a natural compound produced by the body which is important in the metabolism of many reactions. In the body, SAMe is formed from the essential amino acid methionine and adenosine triphosphate (ATP). Vitamin B12 and folic acid are also involved in the SAMe cycle. Unlike its precursor methionine, SAMe is only present in very small amounts in food. The importance of this substance is mainly based on its property as an important donor of methyl groups in the metabolism. With Adonat®, Biogena uses a high-quality brand raw material that guarantees the stability of the product. In addition, the so-called "DRcaps™" protect the capsule contents from the acid stomach contents and release the ingredient only in the intestine - Biogena thus ensures optimum bioavailability.

SAMe 200

- With activated methionine
- Contains 200 mg of the body's own substance SAMe

Possible uses:

- For the targeted intake of S-adenosyl methionine

Bioavailable micronutrients in a pure form:

- According to the pure substance principle
- Without colours, flavours or glazing agents
- Gluten-free
- Lactose-free
- Fructose-free
- Hypoallergenic
- Vegetable capsule shell
- 100 % vegan
- Quality tested
